

## SCIENCE

### INTENT, IMPLEMENTATION AND IMPACT STATEMENT

THIS DOCUMENT OUTLINES: THE INTENT AND RATIONALE BEHIND OUR SCIENCE CURRICULUM, HOW WE DELIVER IT AND HOW WE MEASURE PUPIL PROGRESS.

#### Intent

Using Kapow Primary's Science scheme of work, Stonegate School aims to develop a sense of excitement and curiosity about natural phenomena and an understanding of how the scientific community contributes to our past, present and future.

We want pupils to develop a complex knowledge of Biology, Chemistry and Physics, but also adopt a broad range of skills in working scientifically and beyond. The scheme of work is inclusive and meaningful, so all pupils may experience the joy of science and make associations between their science learning and their lives outside the classroom. Studying science allows children to appreciate how new knowledge and skills can be fundamental to solving arising global challenges.

Through the school's mixed aged classes and by using Kapow Primary scheme of work, we aim to encourage critical thinking and empower pupils to question the hows and whys of the world around them.

Our Science Curriculum encourages:

- A strong focus on developing knowledge alongside scientific skills across Biology, Chemistry and Physics.
- Curiosity and excitement about familiar and unknown observations.
- Challenging misconceptions and demystifying truths.
- Continuous progression by building on practical and investigative skills across all units.

- Critical thinking, with the ability to ask perceptive questions and explain and analyse evidence.
- Development of scientific literacy using wide-ranging, specialist vocabulary.

Kapow Primary's Science scheme of work enables pupils to meet the end of key stage attainment targets in the national curriculum and the aims also align with those set out in the national curriculum.

### Implementation

The implementation of the curriculum relates to how the learning is delivered across our school. This takes the intent of the learning and translates it into a progressive and effective curriculum.

In order to meet the aims of the National curriculum for Science, we have identified the following key strands:

- **Scientific knowledge and understanding** of:
  - Biology – living organisms and vital processes.
  - Chemistry – matter and its properties.
  - Physics – how the world we live in 'works'.
- **Working scientifically** – processes and methods of science to answer questions about the world around us.
- **Science in action** – uses and implications of science in the past, present and for the future.

The Kapow Primary scheme enables the Stonegate curriculum to be a spiral one is a spiral curriculum, with essential knowledge and skills revisited with increasing complexity, allowing pupils to revise and build on their previous learning. A range of engaging recall activities promote frequent pupil reflection on prior learning, ensuring new learning is approached with confidence.

The **Science in action** strand is interwoven throughout our scheme to make the concepts and skills relevant to pupils and inspiring for future application. Cross-curricular links are included throughout each unit, allowing children to make connections and apply their Science skills to other areas of learning.

Each unit is based upon one of the key science disciplines; Biology, Chemistry and Physics and to show progression throughout the school we have grouped the National curriculum content into six key areas of science:

**Plants**

**Animals, including humans**

**Living things and habitats**

**Materials**

**Energy**

**Forces, Earth and space.**

Pupils explore knowledge and conceptual understanding through engaging activities and an introduction to relevant specialist vocabulary. As suggested in Ofsted's Science research review (April 2021), the 'working scientifically' skills are integrated with conceptual understanding rather than taught discretely.

This provides frequent, but relevant, opportunities for developing scientific enquiry skills. The scheme utilises practical activities that aid in the progression of individual skills and also provides opportunities for full investigations.

Each year, pupils have an optional exploratory 'Making connections' unit that delves beyond the essential curriculum, assimilating prior knowledge and skills to evoke excitement and to provide an additional method of assessing scientific attainment.

Lessons incorporate various teaching strategies from independent tasks to paired and group work, including practical, creative, computer-based and collaborative tasks. This variety means that lessons are engaging and appeal to those with different learning styles. Guidance for adapting the learning is available for every lesson to ensure that all pupils can access learning, and opportunities to stretch pupils' learning are available when required. Knowledge organisers for each unit help to identify prior and future curriculum links to make the scheme as meaningful as possible and reinforce key technical terms.

Strong subject knowledge is vital for staff to deliver a highly effective and robust Science curriculum. Each unit of lessons includes multiple teacher videos and resources to develop subject knowledge, target fundamental misconceptions effectively and support ongoing CPD.

## Impact

An enquiry-based approach to learning will allow teachers to assess children against the National curriculum expectations for Science.

The impact of our school's curriculum, using Kapow Primary's Science scheme, can be constantly monitored through both formative and summative assessment opportunities.

Each lesson includes guidance to support teachers in assessing pupils against the learning objectives and any relevant scientific enquiry skills. Furthermore, each unit has a unit quiz and a knowledge and skills catcher, which can be used at the beginning and/or end of the unit to provide a summative assessment.

Opportunities for children to communicate using scientific vocabulary will also form part of the assessment process in each unit.

After experiencing our curriculum, pupils will leave school equipped with the requisite skills and knowledge to succeed in key stage 3 Science.

We are committed to ensure that our pupils will have the necessary tools to confidently and meaningfully question and explore the world around them as well as critically and analytically experiencing and observing phenomena.

Pupils will understand the significance and impact of Science on society.

## Impact Statements

The expected impact of our curriculum from following the Kapow Primary Science scheme of work is that children will:

- Develop a body of foundational knowledge for the Biology topics in the National curriculum: Plants; Animals, Including Humans; Living Things and Their Habitats; Evolution and Inheritance.
- Develop a body of foundational knowledge for the Chemistry topics in the National curriculum: Everyday Materials; Uses of Everyday Materials; Properties and Changes of Materials; States of Matter; Rocks.
- Develop a body of foundational knowledge for the Physics topics in the National curriculum: Seasonal Changes; Forces and Magnets; Sound; Light; Electricity; Earth and Space.
- Be able to evaluate and identify the methods that 'real world' scientists use to develop and answer scientific questions.
- Identify and use equipment effectively to accurately gather, measure and record data.
- Be able to display and convey data in a variety of ways.
- Analyse data in order to identify, classify, group, and find patterns.
- Use evidence to formulate explanations and conclusions.
- Demonstrate scientific literacy through presenting concepts and communicating ideas using scientific vocabulary.
- Understand the importance of resilience and a growth mindset.
- Meet the end of key stage expectations outlined in the National curriculum for Science.
